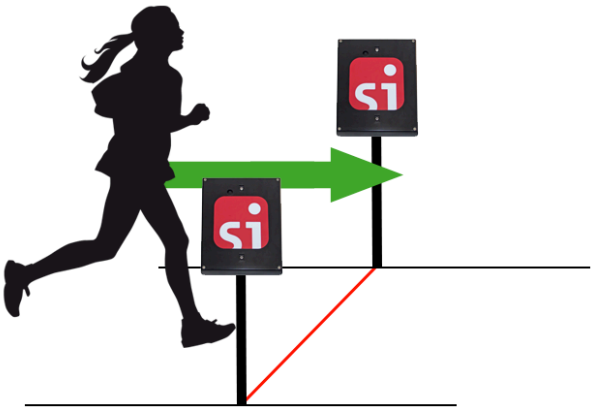
Instructions SportIdent Air+

In the sprint race of June 28th the SportIdent Air+ (MW Senior categories) system will be in effect , the following are some of the instructions.
Each athlete will receive a SIAC finger chip from the organization (SportIdent Active Card).

Start
At the start of the race competitors have to insert the SIAC in the "CLEAR" station (to clear data) and "CHECK" station (to turn on the radio mode of the chip) .
Just prior to the start the race map will be handed out.

Race
During the race, just bring the SIAC at about 50 cm from the control point; this will register the passage emitting a sound and a light feedback. Always check the power of the SIAC, in case of malfunction you can always punch in the traditional way, or manually if necessary.


Finish line
At the end of the race, as competitors pass the finish line, two side plates automatically will record their time and turn off the SIAC. Athletes then must go to the computer station to return the chip and get their intermediate times.
